

AMENDMENTS TO THE CLAIMS

Claim 18 (currently amended): A substantially transparent electrode assembly comprising:

- a substrate;
- a high index layer formed on the substrate;
- a ~~metallie~~ conductive layer formed on the high index layer; and
- a high index top layer having a conductivity of at least about 400 ohms/square formed on the conductive layer,

at least the top layer and the conductive layer being patterned so as to divide the conductive layer into a plurality of discrete electrodes.

Claim 19 (original): An electrode assembly according to claim 18 having a plurality of conductors connected to portions of the top layer overlying the discrete electrodes.

Claim 20 (original): An electrode assembly according to claim 18 wherein the high index layer adjacent the substrate is an electrically insulating layer.

Claim 21 (original): An electrode assembly according to claim 18 wherein the substrate comprises a synthetic resin.

Claim 22 (original): An electrode assembly according to claim 18 wherein the high index layer adjacent the substrate comprises at least one of indium oxide, titanium dioxide, cadmium oxide, gallium indium oxide, indium tin oxide and tin dioxide.

Claim 23 (original): An electrode assembly according to claim 18 wherein the conductive layer comprises at least one of gold, silver and a gold/silver alloy.

Claim 24 (original): An electrode assembly according to claim 18 wherein the top layer comprises at least one of indium oxide, titanium dioxide, cadmium oxide, gallium indium oxide, indium tin oxide and tin dioxide.

Claim 25 (currently amended): An electrode assembly according to claim 18 further comprising a coating disposed on ~~wherein~~ at least one surface of the substrate, wherein the coating is ~~bears at least one of~~ a hard polymer coating, and a layer of silica, or a combination thereof.

Claim 26 (original): A liquid crystal display assembly comprising a liquid crystal material sandwiched between two electrode assemblies, at least one of the electrode assemblies being an assembly according to claim 18.

Claim 27 (original): A touch screen display apparatus comprising a display screen having superposed thereover two electrode assemblies, at least one of the electrode assemblies being an assembly according to claim 18.

Claim 28 (previously added): An electrode assembly according to claim 18 wherein the substrate is a material selected from the group consisting of polyether sulfones, poly(alkyl)acrylates, cellulose diacetate, polycarbonates, polyesters, polycarbonate copolymers and poly(bis(cyclopentadinene) condensate).
